Note — Computer-generated Goods Consignment Note. Valid without a manual signature or the Company's seal.

Terms & Conditions of carriage are on page 2 overleaf.

For A. KISHORE BABU & SONS

Authorised Signatory

TERMS & CONDITIONS · TRANSPORT AND SITE UNLOADING PROTOCOL

These conditions govern carriage under this Goods Consignment Note and are binding on the consignor, consignee and any authorised representative at the site.

⚠ IMPORTANT · SEAL VERIFICATION & UNLOADING PROTOCOL

Bitumen, CRMB and PMB are dispatched **without** refinery / supplier seals. For Emulsion, LDO, FO and other products where an official loading-facility seal is provided, the seal number **must be verified against the loading document / invoice** before unloading commences. Any transporter-applied safety seal is a transit-security measure only and is **not** equivalent to an official refinery / supplier seal — damage, absence or apparent tampering of a transporter seal alone **shall not be grounds to stop or refuse unloading**. Any discrepancy must be recorded in the unloading remarks and immediately brought to the attention of the concerned site / consignor / consignee representative.

- 1 Where an official loading-facility seal is applicable, verify the seal number against the relevant loading document / invoice before unloading. Any transporter-applied safety seal discrepancy shall be recorded in the unloading remarks and handled as per the Seal Verification & Unloading Protocol above.
- 2 Physically inspect the driver cabin, tool compartment and the full chassis underside for any foreign objects or concealed material prior to commencing weighment.
- 3 Instruct the driver and crew to remove all non-consignment items — firewood, jerry cans, spare drums, drinking-water containers, personal cargo — from the vehicle before the empty-weight reading is taken.
- 4 Examine the diesel tank, cabin interior and any accessible cavities for modifications or hidden compartments that could be exploited to manipulate the tare or gross weight.
- 5 Confirm that every wheel of the tanker rests fully within the weighbridge platform boundary; partial contact renders the reading invalid and must not be accepted.
- 6 Request the driver and helper to step off the vehicle for both loaded and empty weighments, and obtain the driver's signature against each recorded weight in the site register.
- 7 Follow the standard sampling and quality-testing protocol for the delivered product before opening the discharge valve or dip-checking the compartments.
- 8 After unloading and the empty weighment, open the tank manhole and physically confirm complete evacuation — no residual product may remain inside the compartment.
- 9 Where the tank cannot be fully gravity-drained, deploy the loading ramp and drain-drum method to achieve zero residual product before releasing the vehicle.
- 10 Complete every field of the 'Unloading Details by Site Officials' section on this GCN — with signature, seal and stamp — and retain a duplicate record of the same information at the site for the vehicle's file.
- 11 The driver's signature is mandatory on both the loading slip at the origin location and the unloading slip at the destination site.
- 12 Once the vehicle has been unloaded and released, the carrier accepts no further responsibility for the quality or quantity of the delivered product; the consignee's acknowledgement is deemed final acceptance.
- 13 Where a joint coordination WhatsApp / Signal group has been established, site officials shall upload clear photographs and short videos of the tanker manholes immediately after unloading, to build an audit-safe visual record and to deter any malpractice.
- 14 Insurance for the goods in transit is the responsibility of the consignor or consignee as applicable under the underlying commercial contract; the carrier is not liable for risks properly covered by such insurance (fire, accident, theft or acts of God).
- 15 This Goods Consignment Note is issued subject to the standard conditions of carriage of A. Kishore Babu & Sons. Any dispute arising out of this consignment shall be subject to the exclusive jurisdiction of the competent courts at the carrier's principal place of business.

CONSIGNEE ACKNOWLEDGMENT

I / We hereby confirm that the material described on this Goods Consignment Note has been received in good condition and quantity, and that any applicable seal condition / discrepancy has been recorded as required. I / We have read and agree to the Terms & Conditions above.
