1 Getting Started

What is this?

QORVENA is a Bitumen transport ERP. It tracks Lorry Receipts (LRs), Trips, Freight, Shortage, Invoices, Payments, Suppliers, Customers, and business Reports. The application runs entirely in your web browser and stores every record securely in the cloud.

When should I use it?

Every business day, for every LR, trip, invoice, and receipt. QORVENA replaces manual registers and spreadsheets.

Steps to log in

1. Open the application URL in Google Chrome or Microsoft Edge.
2. On the sign-in card, click **Continue with Google**.
3. Choose your Google account and grant access.
4. First-time users are guided through the company setup wizard.

IMPORTANT

The **Continue as Demo — Skip Login** button is a QA-only shortcut. It is hidden in production builds. Never share the demo token with customers or drivers.

The sign-in page. Use Continue with Google for real accounts; the demo button is disabled in production.

2 Dashboard

What is this?

A one-glance overview of your business — receivables, payables, recent trips, freight for the month, and top customers/suppliers.

Key cards

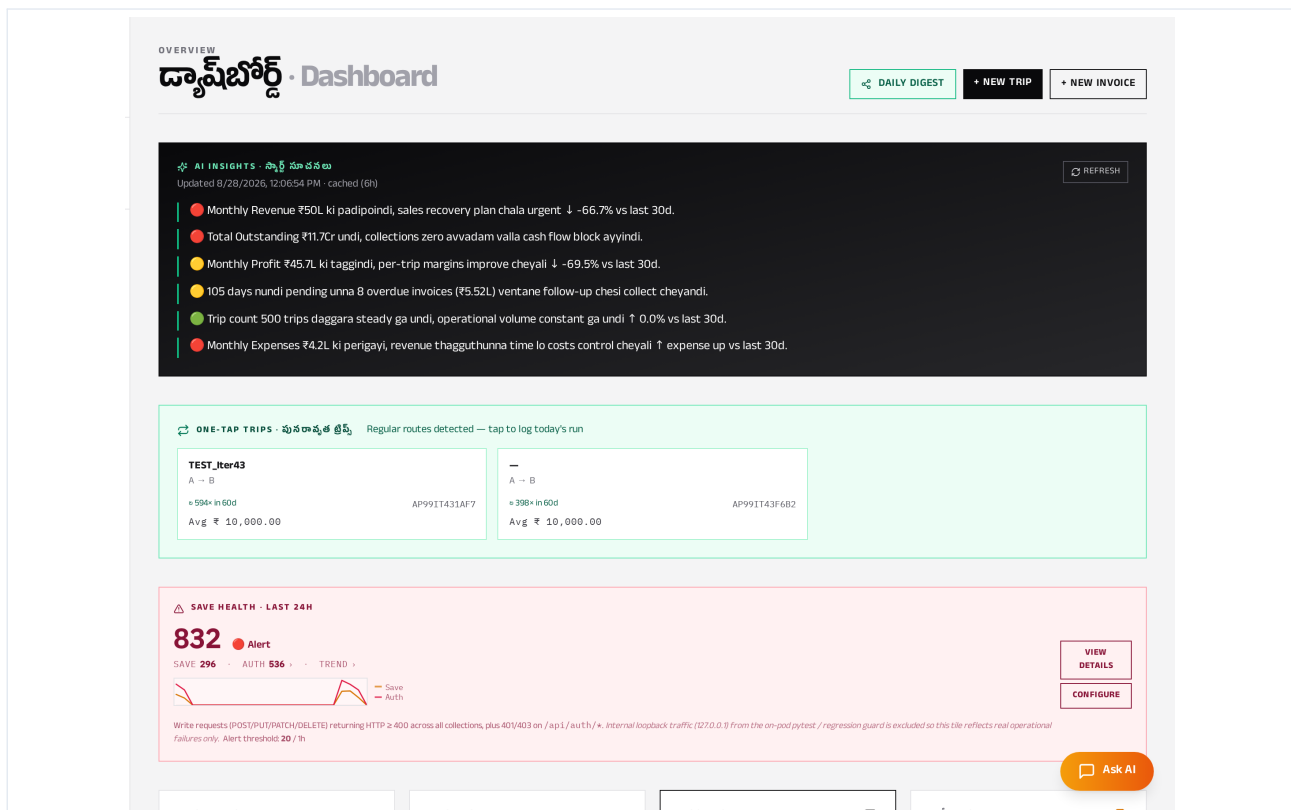

- **Total Outstanding** — total amount customers still owe you.
- **Total Payable** — total amount you still owe suppliers.
- **Recent Trips** — the latest trip records added.
- **Top Suppliers by Outstanding** — suppliers ranked by dues.
- **Monthly Freight** — freight billed / earned this month.

Steps

1. From the top navigation, click **Dashboard**.
2. Review the cards.
3. Click any card to drill into the underlying screen.

TIP

Bookmark the Dashboard URL; it is designed to be the first page you open every morning.

Dashboard headline cards and recent-activity list.

3 Masters

Masters are the foundational records — Customers, Suppliers, Vehicles, Drivers, Products. Set them up **once and correctly**, and every downstream workflow (Trip, Invoice, Report) becomes fast and consistent.

3.1 Customers

What is this?

The party you bill for freight.

When should I use it?

Before you create the customer's first trip.

Steps

1. In the left navigation, click **Customers**.
2. Click + **Add Customer** (top-right).
3. Fill the fields listed below.
4. Click **Save**.

Fields

Field	Required?	Notes
Name	Yes	Legal / trade name
Phone	Yes	Primary contact
GSTIN	Recommended	15-character GSTIN; auto-derives State
State	Yes	Auto-filled from GSTIN when valid
Pincode	Optional	Head-office pincode
Opening Balance	Optional	Defaults to 0

What should I check before Save?

- The name is spelt correctly.
- Phone is a 10-digit mobile.
- GSTIN, if entered, is exactly 15 characters.
- State matches the GSTIN's first two digits.

Duplicate customer warning

QORVENA checks for duplicates the moment you click **Save**. What happens next depends on which field matched.

Match on	What QORVENA does	Buttons you will see
GSTIN	Blocks the save. A GSTIN belongs to only one customer, so a second record cannot be created.	Cancel · Open Existing
PAN (only when neither record has a GSTIN)	Blocks the save.	Cancel · Open Existing
Name (spelling/spaces ignored)	Shows a warning and pauses the save. You can proceed if you are sure this is a genuinely different party.	Cancel · Continue Creating · Open Existing
Phone number	Never blocks. The app quietly highlights other customers with the same phone number so you can verify.	(no pop-up)

- **Cancel** — dismiss the dialog and go back to the form.
- **Open Existing** — jump to the existing record. You can then edit it instead of creating a new one.
- **Continue Creating** — appears **only** for a Name match. Click it when the two records are genuinely different companies (for example, a namesake or a separate branch).

If a GSTIN or PAN match is a mistake and the two records are truly different, ask an Owner or Admin — they have a separate override with a written reason. Regular users cannot bypass GSTIN or PAN matches.

IMPORTANT

Never bypass a duplicate warning to "fix" a spelling. Click **Open Existing** and edit the existing record.

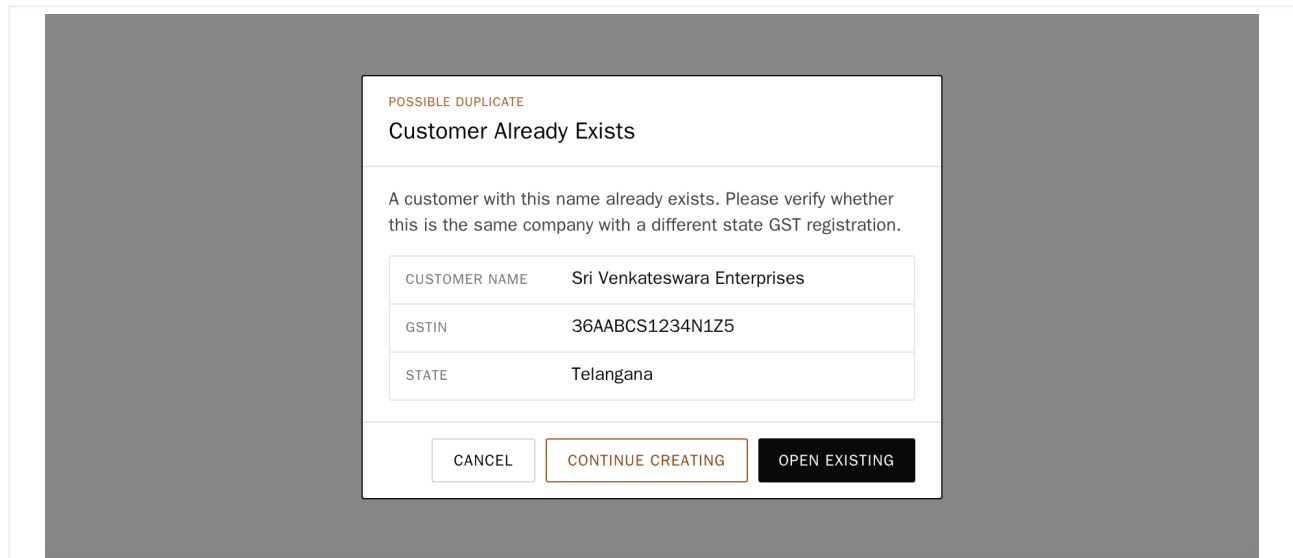

DUPLICATE DETECTED

Customer Already Exists

A customer with this GSTIN already exists.

CUSTOMER NAME	Sri Venkateswara Enterprises
GSTIN	36AABCS1234N1Z5
STATE	Telangana
PHONE	9899012345

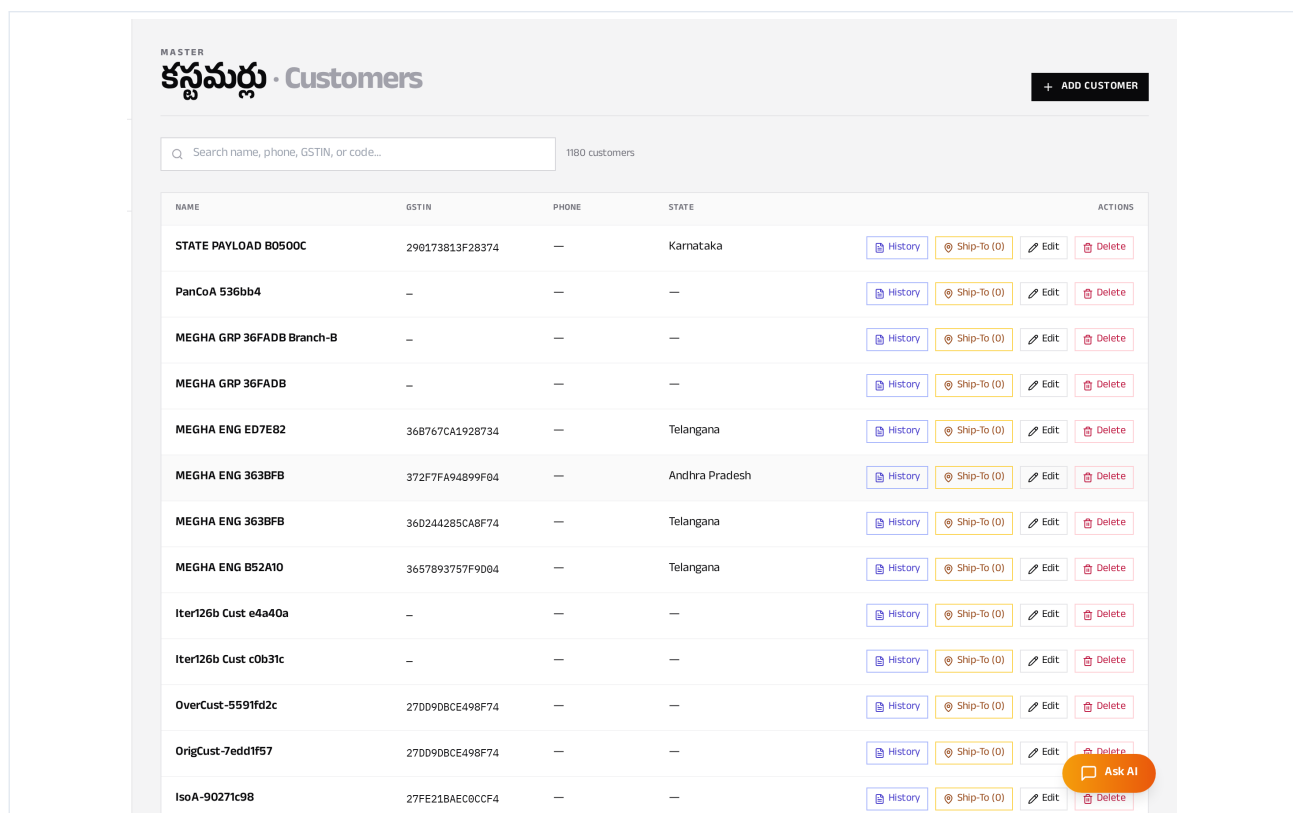

Duplicate detected — GSTIN match. Only **Cancel** and **Open Existing** are available; GSTIN and PAN matches cannot be overridden by regular users.

Possible duplicate — Name match. **Continue Creating** appears **only** for name matches; click it if the two records are genuinely different companies.

Common mistakes

- Pasting the GSTIN with a leading GSTIN prefix. The app now cleans this, but keep entries tidy.
- Editing the wrong record because two similarly-named customers exist. Always confirm the phone or GSTIN.

Customer list with History, Ship-To, Edit, and Delete actions.

3.2 Ship-To Sites

What is this?

A **delivery location** attached to a customer. One customer can have many Ship-To Sites — for example a Bengaluru buyer with unloading points in Nagarkurnool, Karwar, and Kurnool.

When should I use it?

Whenever a customer receives material at more than one physical address.

Steps

1. Open **Customers**.
2. On the customer row, click **Ship-To**.
3. Click + **Add Ship-Site**.
4. Fill the site name, address, GSTIN (optional), State, State Code, and Pincode.
5. Click **Save**.

How GSTIN → State auto-derivation works

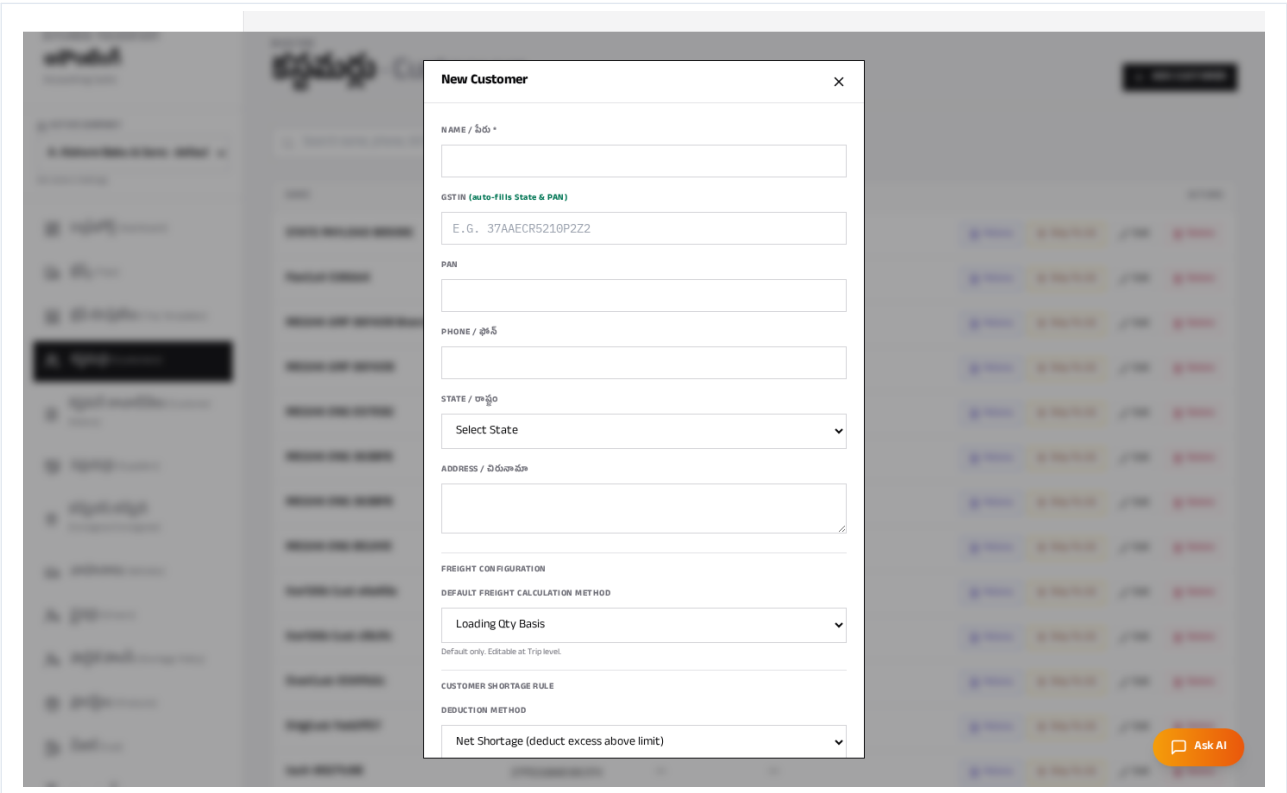

- Enter a valid 15-character GSTIN.
- The first two digits identify the State (e.g. 36 → Telangana; 29 → Karnataka).
- State and State Code auto-fill.
- If you override the State manually and it conflicts with the GSTIN prefix, the app shows an amber conflict banner.

IMPORTANT

Ship-To State is **independent** of Customer State. A Bengaluru-registered customer can legitimately have a Nagarkurnool Ship-To. QORVENA never silently copies Customer State onto a Ship-To Site.

Common mistakes

- Entering the Customer's HO address as the Ship-To. Add a separate site for each actual delivery point.
- Deleting a Ship-To that is already referenced by historical trips. Deactivate the customer's site record only if it is genuinely retired; historical invoices continue to reference the correct address.

Add Customer form. Enter GSTIN first — State auto-fills from the first two digits.

3.3 Suppliers

What is this?

The party who supplies the vehicle / carries the material. Suppliers own vehicles; drivers work under suppliers.

Fields

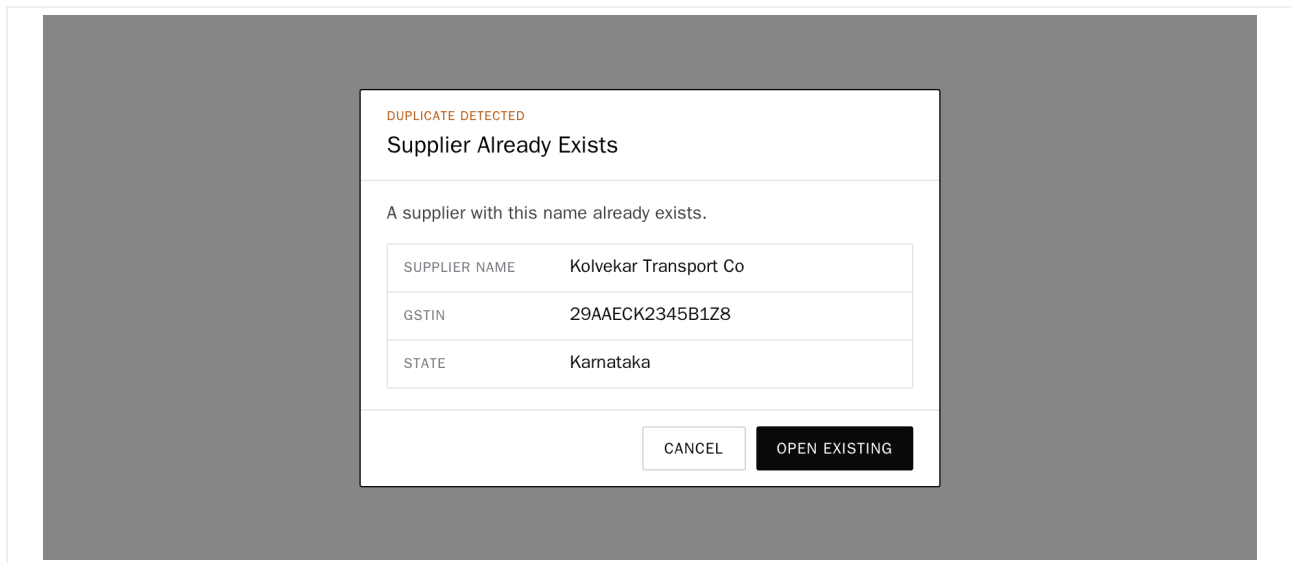

Same shape as Customers — Name, Phone / Mobile, GSTIN, State, PAN, Opening Balance.

Duplicate supplier warning

Supplier duplicates are stricter than customer duplicates. In addition to GSTIN and PAN, **the supplier name is also blocked** — the app will not let you create a second supplier with the same name.

Match on	What QORVENA does	Buttons you will see
GSTIN	Blocks the save	Cancel · Open Existing
PAN (only when neither record has a GSTIN)	Blocks the save	Cancel · Open Existing
Name (spelling/spaces ignored)	Blocks the save	Cancel · Open Existing
Mobile number	Never blocks. The app quietly highlights other suppliers with the same mobile so you can verify.	(no pop-up)

There is **no Continue Creating** button on the supplier dialog. If a block is genuinely wrong, an Owner or Admin can override it with a written reason.

Supplier duplicate dialog — regardless of the matched field, only **Cancel** and **Open Existing** are offered.

Deactivate / Reactivate

What is this?

A **soft-delete** for suppliers who no longer work with you. Their historical trips, invoices, and payments **remain intact**; they simply stop appearing in active pickers.

When should I use it?

- Supplier retired.
- Supplier's contract ended.
- Duplicate supplier accidentally created and rows already exist against it.

How to Deactivate

1. Open **Suppliers**.
2. Click the **List** tab (the top-level card view is separate).
3. Find the active supplier row.
4. Click the red **Deactivate** button at the right of the row.
5. Review the confirmation modal — it shows dependency counts (linked vehicles, trips, payments).
6. Enter a **Reason** (mandatory).
7. Click **Deactivate** to confirm.

How to Reactivate

1. On the Suppliers **List** tab, toggle **Show Inactive** at the top-left.
2. Inactive suppliers appear in muted grey.
3. Click the green **Reactivate** button on the correct row.

IMPORTANT

Deactivate is a **soft-delete**. Historical LRs, trips and invoices continue to display the supplier correctly. Never delete a supplier record from the database — you would break historical books.

Permissions

Only **Owner** and **Admin** roles can Deactivate / Reactivate. Manager, Accountant, and Viewer roles see an **Access denied** message if they try.

DEACTIVATE SUPPLIER

Confirm Deactivation

This is a soft-delete. The supplier will no longer appear in active pickers, but every historical LR, trip, invoice, and payment linked to them remains intact.

SUPPLIER	Kolvekar Transport Co
LINKED VEHICLES	3
HISTORICAL TRIPS	128

REASON *

Contract ended · not active from Jan-2026

CANCEL

DEACTIVATE

Deactivate confirmation dialog. QORVENA lists linked vehicles and historical-trip counts before the action, and a **Reason** is mandatory. The action is a soft-delete only.

No entries. Click "New Party" to add one.						

Ask AI

Consignor / Consignee address book. Add a party once, reuse it across LR's.

3.4 Consignor / Consignee

What is this?

The party who **dispatches** (Consignor) or **receives** (Consignee) the product. Used on the LR and invoice when they differ from the billed Customer.

Steps

1. Click **Consignor / Consignee** in the left navigation.
2. Add the party with name, address, and GSTIN.

3.5 Vehicles

What is this?

Each truck / tanker in your (or your suppliers') fleet.

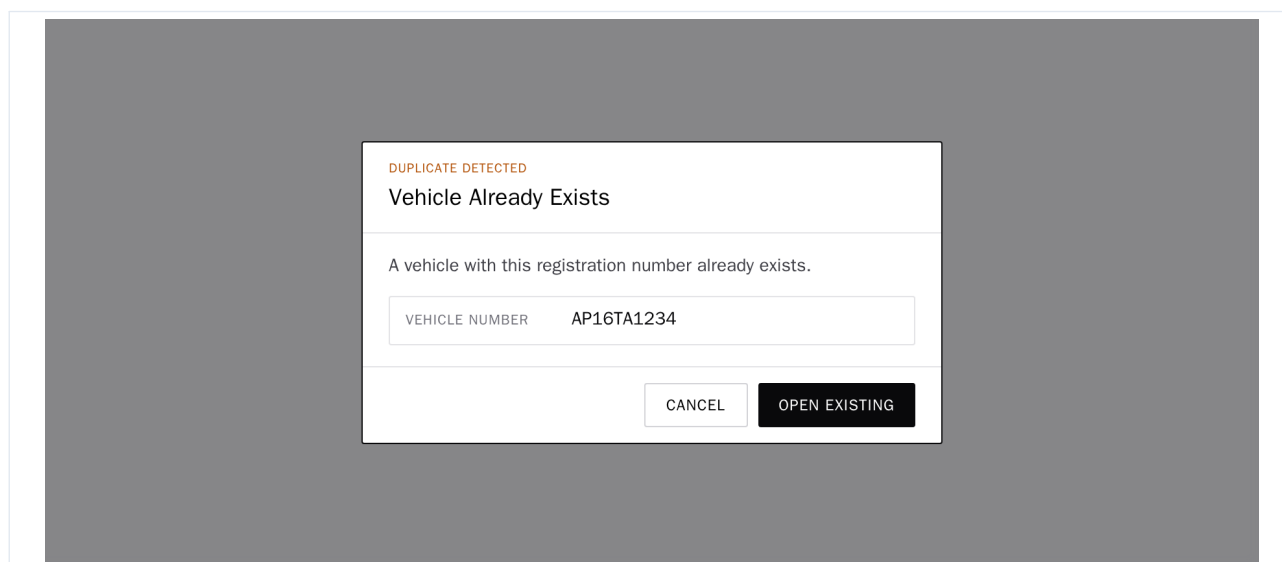

Fields: Vehicle number, capacity (MT), owning Supplier, Insurance expiry, Permit expiry, RC number.

Duplicate vehicle handling

Vehicles are matched purely on the **vehicle number** (upper-case, spaces removed). QORVENA never creates two records for the same vehicle — if you enter one that already exists, the app quietly points you at the existing record.

Match on	What QORVENA does	Buttons you will see
Vehicle Number	Opens the dialog and offers to take you to the existing vehicle. No new record is created.	Cancel · Open Existing

The bulk-import path is stricter still: duplicate vehicle numbers inside the same file, or vehicle numbers that already exist in your account, are rejected with a clear error line — never merged silently.

Vehicle duplicate dialog. The backend never creates a second row; it returns the existing one, and the UI offers **Open Existing** so you can edit it.

What should I check before Save?

- Vehicle number is in the correct RTO format (e.g. AP16TA1234).

- Insurance / permit expiry dates are current.

3.6 Drivers

What is this?

The person driving the vehicle.

Fields: Name, phone, licence number, licence expiry, associated Supplier, salary / policy.

Common mistakes

- Forgetting to enter licence expiry — the compliance report will flag such drivers as at-risk.

3.7 Products

What is this?

The material you carry — e.g. Bitumen VG 40, VG 30, Emulsion.

Fields

- **Rate per MT** — used when calculating shortage deductions.
- **Allowance %** — the acceptable shortage window.

3.8 Shortage Policy

What is this?

The formula that converts a physical short (Load MT – Unload MT) into an invoice deduction.

Common methods

- **Net Shortage** — deduct only the amount **above** the allowance.
- **Full Shortage after Limit** — deduct the entire shortage once the allowance is crossed.

IMPORTANT

Changing a policy on the Customer master applies **only to new trips**. Historical trips continue to use the policy that was in force when the trip was created. This protects your closed books.

4 Trips

4.1 Creating a Trip

What is this?

The core operational record — a single vehicle movement from a Loading point to an Unloading point.

Steps

1. Click **Trips** in the left navigation.
2. Click **+ Add** (top-right).
3. Fill the sections listed below.
4. Click **Save Trip**.

Sections

Section	When to fill
Basics — Date, Vehicle, Driver, Customer, Consignor	At dispatch
Loading — From location, Product, Loading Qty (MT), LR number	At dispatch
Freight — Mode (Per Ton / Fixed / Round Trip), Rate	At dispatch
Unloading — Unload Date, Unload Qty, To location, Ship-Site	After unloading is confirmed
Advances / Diesel from Customer	Whenever you give money to the driver
Halting — Arrival date, Waiting days	After unload

TIP

You do **not** have to wait for unloading data to save the trip. Save with Loading complete and empty Unloading fields; return later to fill Unload Qty and Unload Date.

toll	batta	repair	other
notes			

Ask AI

Bulk import — download the Excel template, fill your rows, and upload.

4.2 Loading

Enter the loading quantity in **MT** (metric tons). Assign a unique LR number per company. The app blocks duplicate LR numbers within the same company.

4.3 Unloading

IMPORTANT rules

- **Unload Qty (in MT)** — the actual quantity that came out of the tanker at destination.
- **Unload Date** — the calendar date on which unloading was completed.
- Leave these blank if unloading has not happened yet.

WARNING

Missing unload data means **"Not Available Yet"** — it does **NOT** mean "zero unloaded". Never enter Unload Qty = 0 to force-close a trip. 0 is treated as a real zero-unload (a total loss) which is almost never correct.

4.4 Freight vs Shortage

Freight and Shortage are two **independent** business states:

Trip state	Freight available?	Shortage available?
Loaded, dispatched, unloading pending	Yes — calculated at dispatch	No — shown as –

Trip state	Freight available?	Shortage available?
Unloaded, Unload Qty and Unload Date entered	Yes	Yes — calculated using the snapshotted shortage policy

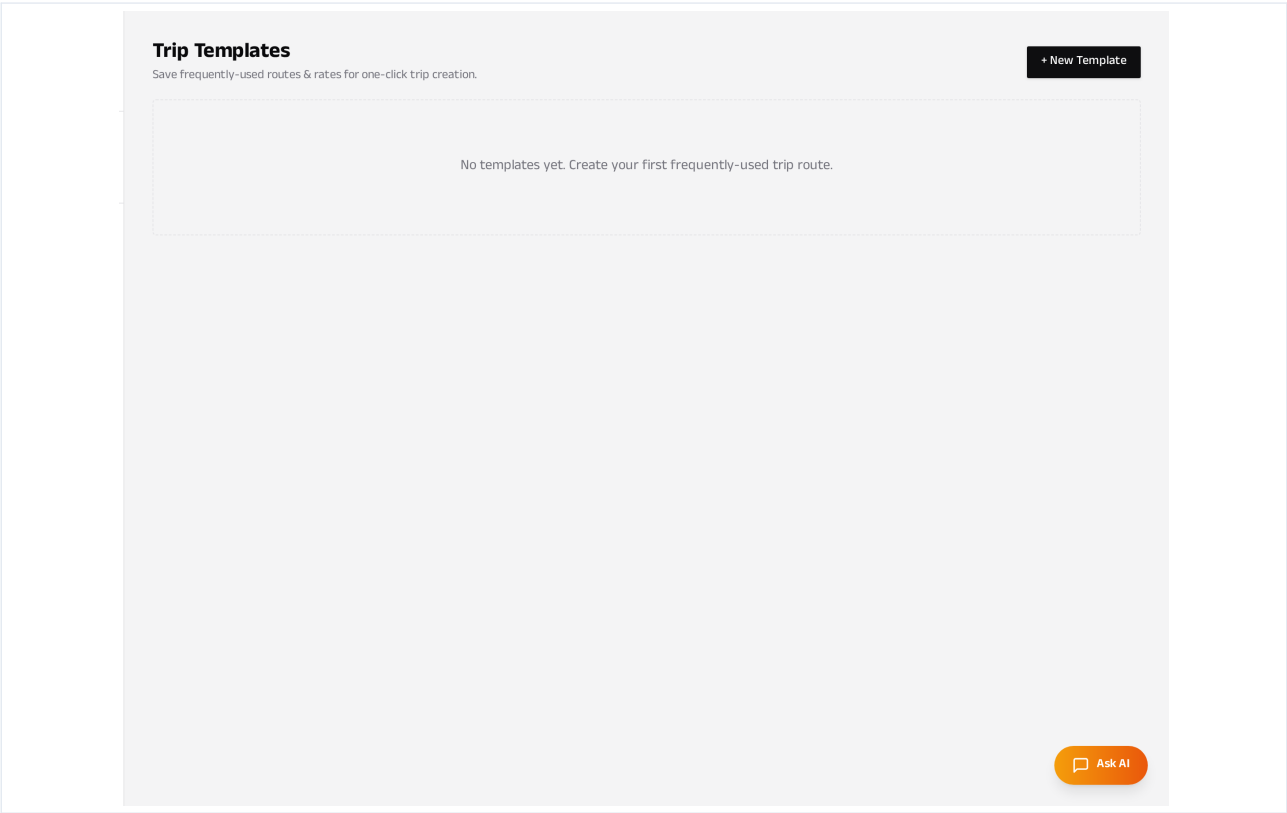

- Rule**
- Freight is finalised at dispatch.
 - Shortage becomes meaningful **only** after actual unloading data is entered.
 - Pre-unload invoices must **never** fabricate a shortage number — QORVENA correctly displays – for Actual Short / Allowance / Net Short until unload data arrives.

4.5 Trip Templates

What is this?

A saved set of default values (Customer, Product, From-To, Rate) for repetitive routes. One click fills the whole trip form.

- Steps**
1. Click **Trips → Templates**.
 2. Click **+ New Template**.
 3. Fill and save.
 4. Next time, on the trip form, choose the template from the **Apply Template** dropdown.

Trip Templates — save repetitive routes for one-click reuse.

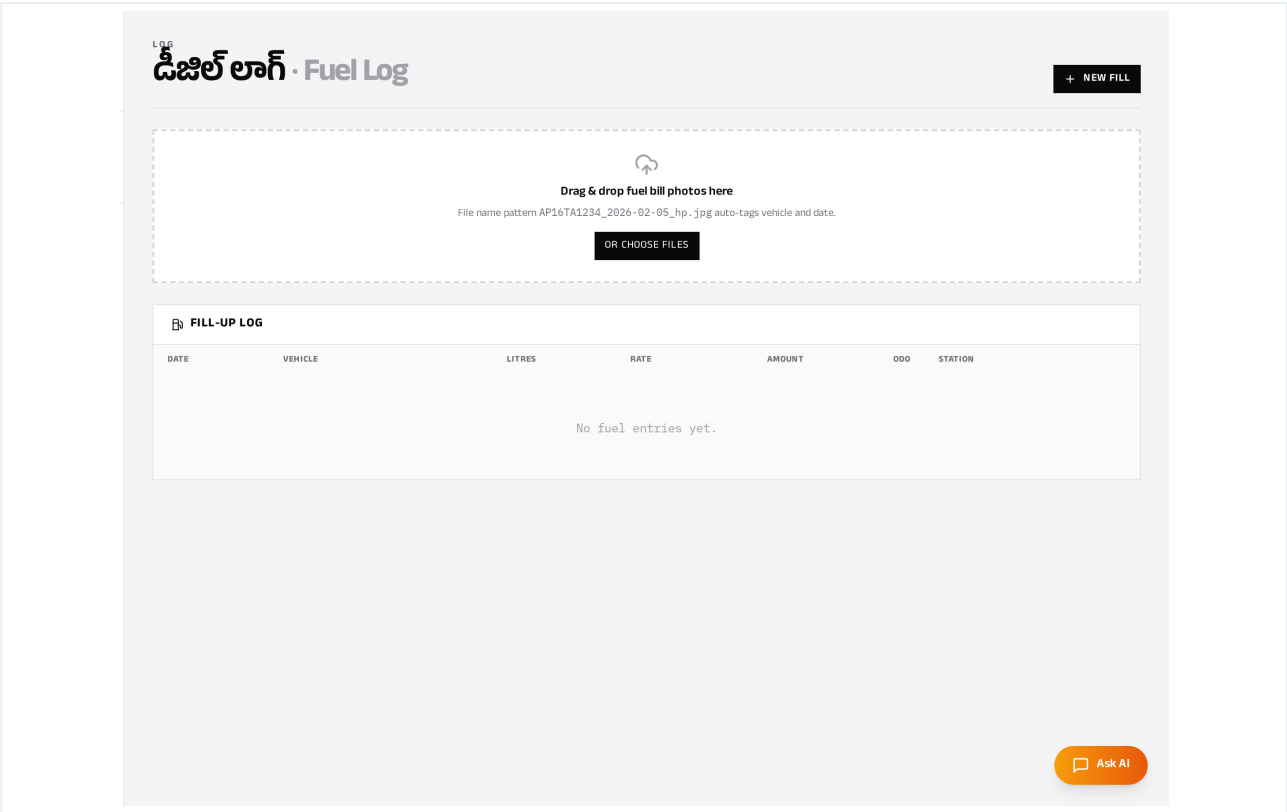

5 Fuel Log

What is this?

A record of diesel fill-ups per vehicle, used for costing and reconciliation.

Steps

- 1. Click **Fuel** in the left navigation.
- 2. Either drag-and-drop a fuel-bill photo (auto-tags vehicle + date from the filename pattern AP16TA1234_2026-02-05_hp.jpg) or click **+ New Fill** to enter manually.
- 3. Fill vehicle, date, litres, rate, amount, odometer, station.
- 4. Click **Save**.

6 Invoices

6.1 Creating an Invoice

What is this?

Consolidating one or more trips into a GST-compliant tax invoice for a customer.

Steps

1. Click **Invoices** → **+ Create** (or use the shortcut from the customer's screen).
2. Select the **Customer**.
3. Apply filters — date range, Ship-Site — to narrow the trip list.
4. **Tick** the trips to include in this invoice.
5. Set the **Invoice Date**. The **Invoice Number** is auto-assigned by the server from the company's prefix + FY + running sequence (see below).
6. Click **Preview** to review the calculated totals and PDF layout.
7. Click **Save** to finalise.

What should I check before Save?

- The trip list matches what you actually intend to bill.
- The Ship-To block is correct (see 6.2).
- Tax split (IGST vs CGST/SGST) matches the invoice jurisdiction.
- The invoice date sits inside the correct financial year (Apr–Mar).

Invoice numbering

QORVENA generates each invoice number automatically. There is **no** per-invoice override on the create screen — the sequence is guaranteed by the server.

Format: {Invoice Prefix}/{FY}/{Sequence} — e.g. AKB/26-27/0018.

- **Invoice Prefix** and **Next Invoice Number** are set once per company in **Settings**.
- The prefix may already include the FY (VBK/26-27/), in which case QORVENA appends only the running sequence — no doubled slashes, no doubled FY.
- Sequences are per company and increment on every successful save.
- The API rejects duplicate invoice numbers.

IMPORTANT

Only change **Invoice Prefix** or **Next Invoice Number** in **Settings** when you have a real, deliberate reason (new FY, new company, legacy migration). Retro-changing after invoices have gone out breaks your audit trail.

CGST + SGST (Intra-state)

HSN / SAC CODE

996791 - Goods Transport Agency Services

Applies to all trips in this invoice. Trips may still override individually.

GST TREATMENT

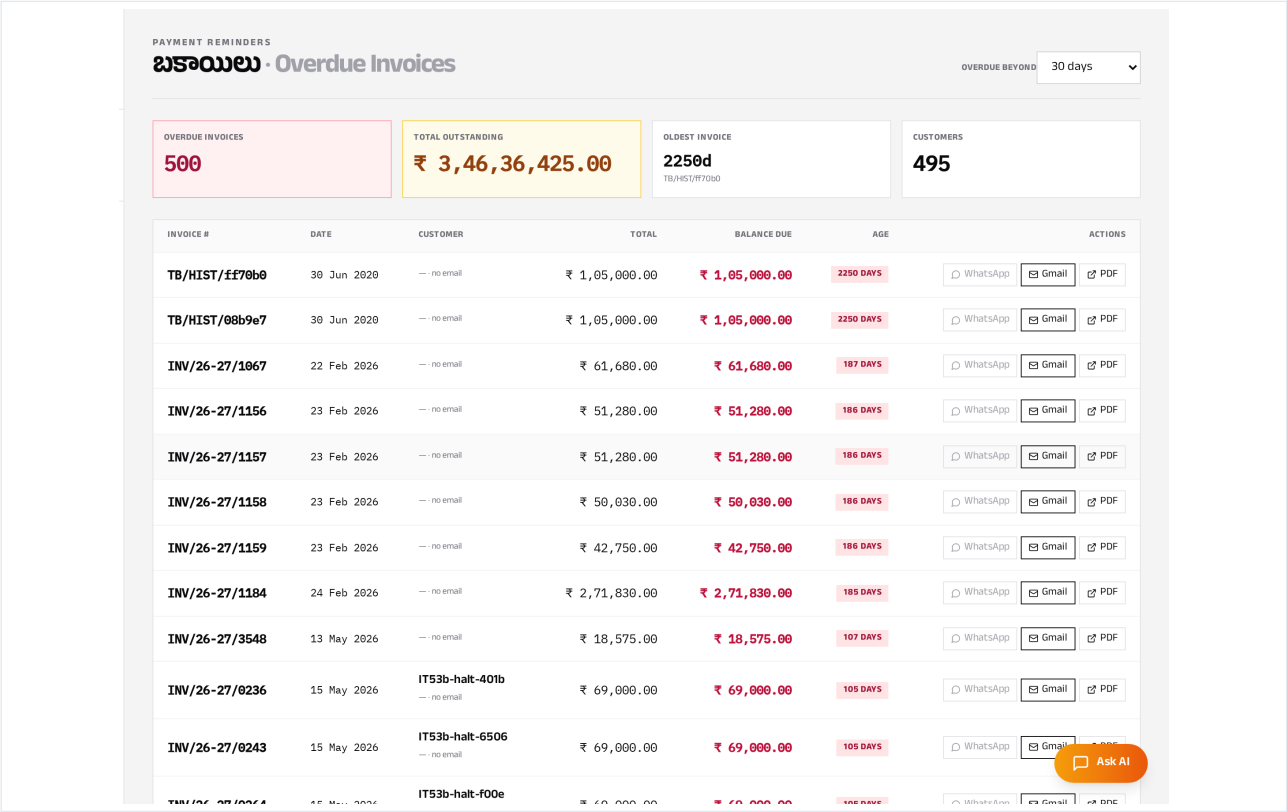

RCM - RECIPIENT PAYS TAX

NORMAL GST - FORWARD CHARGE

RCM selected tax will be shown on invoice but NOT collected. Customer files it under RCM.

Ask AI

Invoice creation — pick a customer, tick trips, preview totals, save.

Overdue Invoices screen — filter by age bucket and send reminders.

6.2 Ship-To Handling

The invoice header shows a **single Ship-To block** when all selected trips point to the **same physical delivery site** — even if one trip carries an explicit ship_site_id and another only has a to_location string that clearly matches the same site (by name, pincode, or address).

If the selected trips genuinely go to different Ship-Sites, the invoice shows:

"Mixed destinations — see trip rows below"

and each trip row prints its own Ship-To detail.

IMPORTANT

Ship-To on the invoice is derived from the trip, not the Customer master. Customer State ≠ Ship-To State is legal and common.

6.3 Pre-Unload vs Completed-Unload Invoices

You can raise an invoice as soon as the vehicle is dispatched. Waiting for unloading is **not** required.

Pre-Unload Invoice

Column	Value
Load MT	actual value
Unload MT	—
Unload Date	—

Column	Value
Actual Short	—
Allowance	—
Net Short	—
Freight	actual freight (fully calculated)

The invoice total is Freight + Tax; no shortage is deducted.

Completed-Unload Invoice

Column	Value
Load MT	actual value
Unload MT	actual value
Unload Date	actual date
Actual Short	calculated
Allowance	policy-based
Net Short	calculated
Freight	actual freight

Once you enter Unload Qty and Unload Date on the trip, the shortage engine runs automatically. Regenerate the invoice PDF to reflect the actual short / allowance / net.

WARNING

Do **NOT** enter Unload Qty = 0 just to force the invoice to show a shortage. 0 MT will be treated as a genuine zero-unload — a total loss.

6.4 Invoice PDF (Page X of Y)

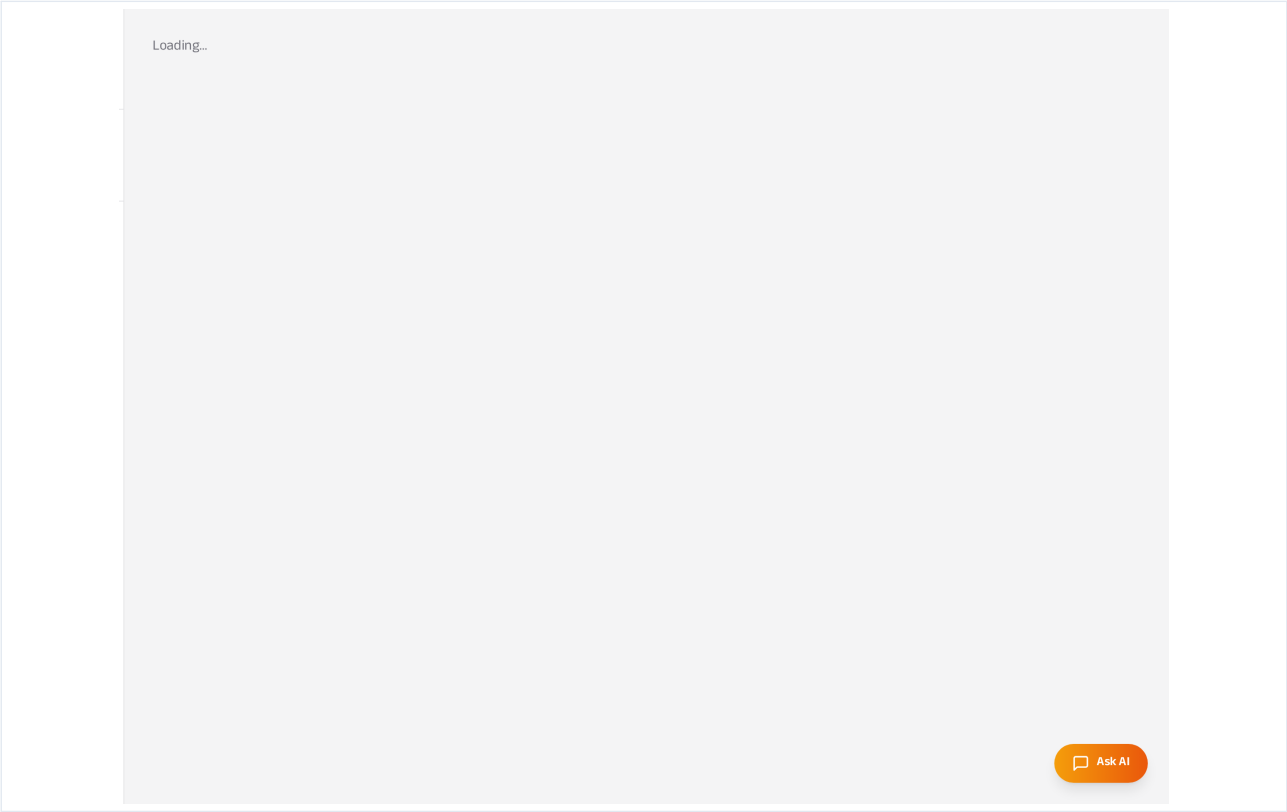

Every invoice PDF prints **Page X of Y** in the bottom-right of every page:

- Single-page invoice → Page 1 of 1
- Two-page invoice → Page 1 of 2 and Page 2 of 2
- Long invoices flow across as many pages as needed.

The signature block appears only on the **last** page.

GSTIN cleanup

The Ship-To GSTIN is normalised on display. Even if a legacy record stored the GSTIN with a GSTIN prefix or trailing tabs, the PDF renders only the 15-character GSTIN.

7 Payments

What is this?

Recording money received from customers and money paid to suppliers.

Steps

1. Click **Payments** (from the Suppliers or Customers screen) → + **Add**.
2. Select the party (customer or supplier).
3. Fill amount, mode (Cash / Bank / UPI / Cheque), reference, date, receipt-or-voucher number.
4. Click **Save**.

The party's running balance updates immediately.

8 Reports

Path: **Reports** in the left navigation.

Pre-built reports

Report	What it shows
LR Register	Every LR with load, unload, freight, and shortage
Customer Statement	Invoice-wise ledger with running balance
Supplier Settlement	Trip-wise settlement with driver / supplier splits
GSTR-1 Ready	Invoice-wise GST summary for filing
Cash Flow	Receipts vs payments by date
P&L	Freight income vs costs

Each report supports date filters and Export to Excel / PDF.

The screenshot displays the 'REPORTS' section of the QORVENA interface, titled 'రిపోర్ట్లు · Reports'. It features a horizontal menu with several report categories: 'లెడ్జర్ · Ledger', 'లాభ-నష్టం · P&L', 'సప్లయర్ P&L · Supplier P&L', 'సప్లయర్ స్టేట్మెంట్ · Supplier Statement', 'LR రిజిస్టర్ · LR Register', 'హాల్టింగ్ · Halting', 'బాలాన్స్ షీట్ · Balance Sheet', and 'GSTR-1'. Below the menu, there is a filter section with a 'CUSTOMER *' dropdown menu (showing '-- Select --'), a 'FROM (OPTIONAL)' date field (showing 'mm/dd/yyyy'), and a 'TO (OPTIONAL)' date field (showing 'mm/dd/yyyy'). A 'RUN' button is located to the right of the date fields. An 'Ask AI' button is visible in the bottom right corner.

9 Customer History

What is this?

A deep-drill single-customer view showing all trips, invoices, payments, and running balance on one page. Also displays age buckets (0-30, 30-60, 60-90, 90+ days) for outstanding invoices.

Steps

1. Click **Customers** → **History**.
2. Search or select the customer.
3. Scroll for trip / invoice / payment tables and the age-bucket card.

Files

What is this?

Attach documents (LR scans, delivery challans, driver documents) to trips, suppliers, or drivers. Files are stored securely in cloud object storage.

Steps

1. Click **Files** in the left navigation.
2. Choose the **Category** and drag-and-drop the file (max 10 MB per file).
3. Files appear in **Your Files** with Preview and Delete actions.

11 Team & Roles

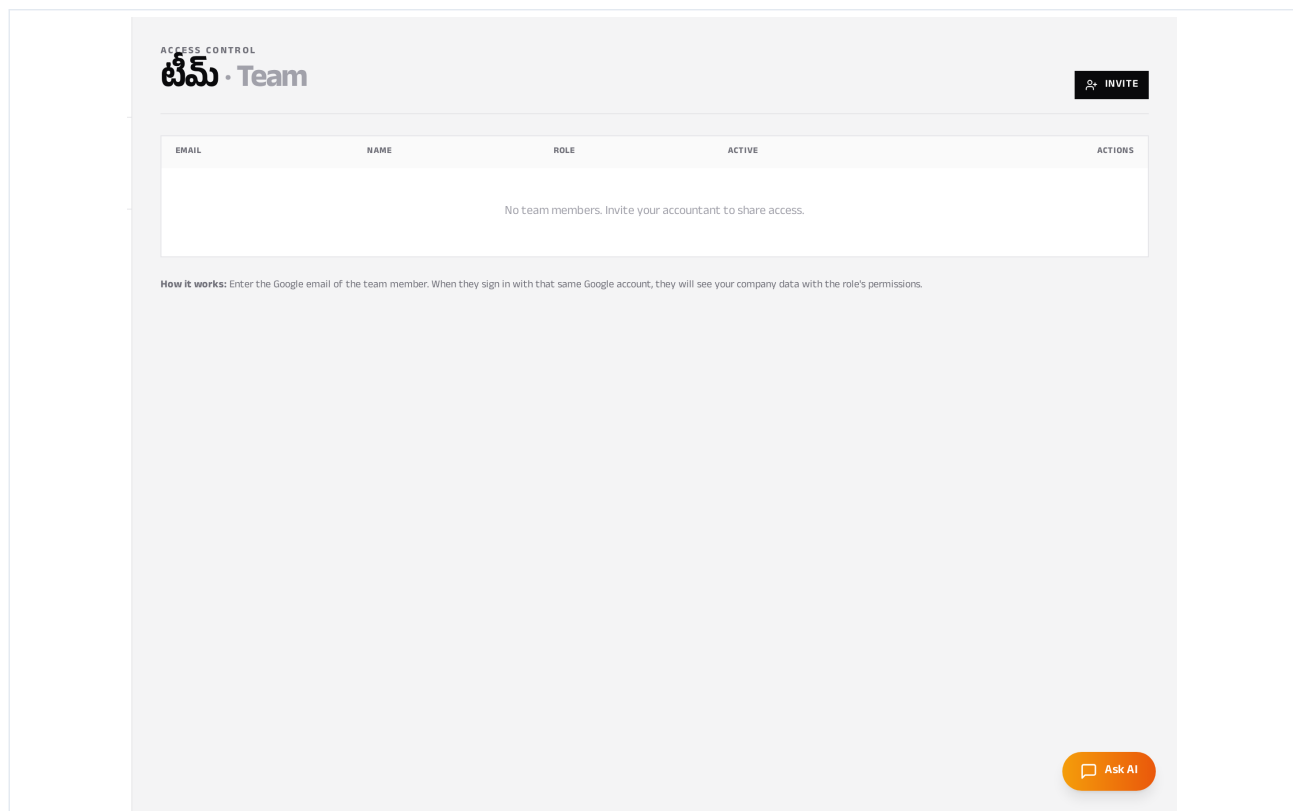

Path: **Team** in the left navigation.

Roles

Role	Access
Owner	Full access, Team management, Supplier Deactivate
Admin	Most write access, Supplier Deactivate
Manager	Create / edit trips, invoices, payments; no Deactivate
Accountant	Invoice & payment access; masters are read-only
Viewer	Read-only

Steps to invite a team member

1. Click **Team** → **+ Invite Member**.
2. Enter the invitee's email and choose a Role.
3. Click **Send Invite**.
4. The invitee signs in with their own Google account.

12 Settings

Path: **Settings** in the left navigation.

Sections

- **Company** — legal name, address, PAN, GSTIN, bank details. These appear on the invoice PDF header and footer.
- **Numbering** — Invoice Prefix and Next Invoice Number per company. QORVENA auto-composes the running number as {Prefix}/{FY}/{Sequence}.
- **Products** — as per section 3.7.
- **Shortage policy** — as per section 3.8.
- **Notifications** — email digest opt-ins.

TIP

Only the **Owner / Admin** can change the invoice numbering settings. Do this only when starting a new financial year or migrating from a legacy series — never mid-year.

Ask AI

13 Common Real-World Situations

Situation	What to do
Driver confirms unloaded quantity by phone	Open the trip → Unloading section → enter Unload Qty and Unload Date → Save. Regenerate the invoice PDF.
Customer says the GSTIN on the invoice was wrong	Edit the customer's GSTIN → app auto-updates State → regenerate the invoice. Do not edit the invoice number (it is server-assigned; there is no override).
Supplier retired; don't want them appearing in dropdowns	Suppliers → List tab → Deactivate . Historical trips remain intact.
Ship-To State was wrong on an old invoice	Edit the Ship-Site → correct GSTIN → State auto-updates. Only future invoices reflect the change unless you re-open and re-save the older invoice.
Vehicle broke down mid-trip; no unloading yet	Save the trip with Load MT and blank Unloading. Invoice can be raised for freight; shortage stays —.
Duplicate customer created accidentally	Automatic merge is not supported. Deactivate the wrong one; ask an Admin to move trips manually if needed.

14 Form Draft Recovery

What is this?

If the browser closes or the tab crashes while you were filling a Trip, Customer, or Invoice form, the app **auto-saves a local draft** with your entries so far.

How to recover

1. Reopen the same form (e.g. Trips → + Add).
2. If the app detected a meaningful in-progress draft, a subtle **Restore draft?** banner appears at the top of the form.
3. Click **Restore** to bring back your entries.

IMPORTANT

Only **meaningful** drafts (with real data typed into fields) are offered for recovery. Blank untouched forms will not create ghost drafts, so you won't be pestered by empty prompts.

Where drafts live

Locally in your browser only. Drafts do **not** sync across devices. Save the form to persist to the cloud as soon as you can.

15 Save Retry / Resilience

What is this?

QORVENA is built to survive flaky mobile networks and dropped Wi-Fi. Even if the internet flickers while you click **Save**, the app never saves the same record twice.

What you will see

- One green **Saved** confirmation, not two.
- If the network drops mid-save, the app quietly retries in the background.
- Your typed data is not lost.

If the Save confirmation doesn't appear

1. Wait about 30 seconds — the app is retrying quietly.
2. If nothing appears, hard-refresh with **Ctrl + Shift + R**.
3. Open the list view (Trips, Invoices, etc.) and check whether the record is already there **before** you re-enter it.

TIP

The green **Saved** toast is your proof. If you see it, the record is on the server — even if the page looks like it is still loading.

16 Troubleshooting

Symptom	Likely cause	Fix
Customer "Already Exists" dialog with Continue Creating button	Name-only match (warning)	Verify the details. Click Continue Creating if this is a genuine namesake or a different branch.
Customer or Supplier "Already Exists" without a Continue Creating button	The GSTIN, PAN, or Supplier name already exists	Click Open Existing and edit that record. If the block is genuinely wrong, ask your Owner or Admin to override it with a reason.
Vehicle "Already Exists" dialog	Vehicle number is already registered in your account	Click Open Existing . The app never creates two records for the same vehicle.
REFRESHING... pill visible for more than 15 seconds	The app is re-checking its connection to the server, often after the laptop woke up from sleep	Wait 15–30 seconds. If it stays, press Ctrl + Shift + R to reload.
Invoice PDF still shows the old State	The Ship-To Site was corrected but the invoice PDF hasn't been regenerated	Edit the Ship-To Site → Save → open the invoice and regenerate the PDF.
Shortage column shows — unexpectedly	The trip's Unload Qty has not been entered yet	Open the trip, fill Unload Qty and Unload Date, then Save. Shortage will appear automatically.
Shortage column shows the full Load MT	Your browser is showing an old copy of the invoice PDF	Press Ctrl + Shift + R to force a fresh copy. The latest invoice will correctly show — for pre-unload trips.
Amber App update available nudge	A newer build of QORVENA has been released	Click the nudge. Your in-flight draft is preserved.
Access denied message when clicking Deactivate on a supplier	Your role does not have permission	Ask an Owner or Admin to perform the action.
Nothing happens after you click Save	The internet dropped and the app is retrying quietly	Wait 30 seconds. Check the list view to see whether the record was saved before re-entering.

17 Do's and Don'ts

DO

- Set up all Masters (Customers, Vehicles, Drivers, Products) **first**, before creating trips.
- Use Ship-To Sites for every distinct delivery location.
- Enter GSTINs cleanly — the app auto-derives State.
- Leave Unload Qty and Unload Date **blank** until the vehicle is actually unloaded.
- Regenerate invoice PDFs after any data correction.
- Use Trip Templates for repetitive routes to save time.

DO NOT

- Do **NOT** delete old suppliers or customers — always Deactivate.
- Do **NOT** enter Unload Qty = 0 when unloading is still pending.
- Do **NOT** create duplicate customers — click **Open Existing** on the warning dialog. For genuine namesakes, use **Continue Creating** (only shown for name matches).
- Do **NOT** hard-refresh during a Save — wait for the confirmation toast.
- Do **NOT** manually edit the invoice number — it is server-assigned; change the Prefix / Next Number in **Settings** only when starting a new FY.
- Do **NOT** modify Ship-To State on historical customers expecting old invoices to change — old invoices remain historical unless you re-open and re-save them.
- Do **NOT** share your Google login. Invite team members with their own email addresses.

Appendix A · Keyboard Shortcuts

- **Ctrl + K** — global search
- **Ctrl + Shift + R** — force reload (use only if the UI is stuck)
- **Esc** — close any modal

Appendix B · Quick Reference: Locked Business Rules

The following rules are LOCKED in the current release. They protect data integrity across trips, invoices, and books.

1. Duplicate Masters —

- **Customer** · GSTIN and PAN matches are blocked; **Name** matches show a warning that a regular user can bypass with Continue Creating (Owner/Admin can also override GSTIN/PAN via the admin flow with a written reason). Phone matches are advisory only.
- **Supplier** · GSTIN, PAN, **and Name** all block creation; mobile is advisory only. No Continue Creating button on the supplier dialog.

- **Vehicle** · Match on vehicle number is idempotent — the backend returns the existing row, never inserts a second. Modal offers Cancel / Open Existing.
- 2. Ship-To Independence** — Ship-To State is independent of Customer State; GSTIN can derive State / State Code; Customer State is never silently copied to a Ship-To.
- 3. Trip Loading and Unloading** — Loading and Unloading are **separate stages**. Freight is available at dispatch; shortage requires unloading data.
- 4. Missing Unload Data** — Blank unload fields mean "Not Available Yet" — NOT "zero unloaded". Pre-unload invoices must NOT show fabricated shortages.
- 5. Invoice Ship-To** — Preview and PDF are guaranteed identical. GSTIN is cleaned on display. Unload Date renders correctly on the PDF row.
- 6. Invoice Number** — Server-assigned as {Prefix}/{FY}/{Sequence} per company. No per-invoice user override. Prefix and Next Number are set once in **Settings**; both are Owner/Admin-only.
- 7. Invoice Pagination** — Every PDF shows Page X of Y on every page; the signature block appears on the last page only.
- 8. Supplier Deactivate** — Soft-delete only. All historical LRs, trips, and invoices remain intact. Show Inactive toggle reveals them; Reactivate is one click. Owner / Admin only.
- 9. Draft Recovery** — Only meaningful, non-empty forms are offered for restore. Blank forms are ignored.

Appendix C · Support

For questions about the application:

- 1.** Read the relevant section of this manual.
- 2.** Contact your Owner or Admin.
- 3.** For production support, email **bitumentra@gmail.com**.
